University of Barishal

Dept. of Computer Science and Engineering

Course Code: CSE-3205:; Course Title: Artificial Intelligence

Admission Session: 2019-20; **Exam:** Mid Term-I; **Marks:** 20; **Time:** 50 min

1. Consider the following search tree produced after expanding nodes A and B, where each arc is labeled with the cost of the corresponding operator, and the leaves are labeled with the value of a heuristic function, h. For uninformed searches (Depth-First search, Greedy Best-First search, Uniform-Cost search, A* search) assume children are expanded left to right. In case of ties, expand in alphabetical order. **15**

2. Among the given options, which search algorithm requires less memory? And why? Give with an example. **5**

1. Optimal Search 2. Depth First Search 3. Breadth-First Search 4.Linear Search
