University of Barishal

Dept. of Computer Science and Engineering

Course Code: CSE-3205:; Course Title: Artificial Intelligence

Admission Session: 2020-21; **Exam:** Mid Term-I; **Marks:** 20; **Time:** 50 min

1. Compare uninformed search and informed search in terms of completeness, optimality, time complexity, and space complexity. 5

2. Explain why heuristics are important in AI search problems with an example scenario. 5

3. Imagine you are designing an intelligent personal shopping agent for an online store. The agent should understand the user's preferences (style, budget, and past purchase history). Negotiate discounts with the store's pricing system. Recommend the best items while balancing cost, quality, and delivery time. How would you design the perception, reasoning, and action components of this agent, and what AI techniques would you apply in each step? 5

4. Explain the difference between simple reflex agents and model-based reflex agents. 5
