Q: Problem Statements:

A Hospital Management System is an essential tool for streamlining hospital operations and providing efficient patient care. As part of this system, we need to develop a feature that allows hospital administrators to retrieve a list of doctors. The primary objective is to facilitate quick access to vital doctor information, enabling seamless patient-doctor matchmaking and overall operational efficiency.

a. Design an API for retrieving the list of doctors.
b. Design a Search API for retrieving the list of doctors based on specific criteria.
